## European Technical Assessment

**ETA 17/0187  
of 19/08/2019**

**Technical Assessment Body issuing the ETA:** Technical and Test Institute  
for Construction Prague

**Trade name of the construction product**

SMART S-IRE

**Product family to which the construction  
product belongs**

Product area code: 33  
Bonded injection type anchor for use in  
cracked and uncracked concrete

**Manufacturer**

pgb-Polska Sp. z o.o.  
ul. Fryderyka Wilhelma Redena 3  
41-807 Zabrze  
Polska

**Manufacturing plant**

pgb-Polska Sp. z o.o. Plant 1

**This European Technical Assessment  
contains**

20 pages including 17 Annexes which form  
an integral part of this assessment.

**This European Technical Assessment is  
issued in accordance with regulation  
(EU) No 305/2011, on the basis of**

EAD 330499-01-0601

**This version replaces**

ETA 17/0187 issued on 24/02/2017

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body - Technical and Test Institute for Construction Prague. Any partial reproduction has to be identified as such.

## 1. Technical description of the product

The SMART S-IRE with steel elements is bonded anchor (injection type).

Steel elements can be galvanized or stainless steel threaded rods or rebars.

Steel element is placed into a drilled hole filled with injection mortar. The steel element is anchored via the bond between metal part, injection mortar and concrete. The anchor is intended to be used with various embedment depth up to 20 diameters.

The illustration and the description of the product are given in Annex A.

## 2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

## 3. Performance of the product and references to the methods used for its assessment

### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
<b>Static and quasi-static loading</b>	
Resistance to steel failure (tension)	See Annex C 1, C 2
Resistance to combined pull-out and concrete failure	See Annex C 1, C 2
Resistance to concrete cone failure	See Annex C 1, C 2
Edge distance to prevent splitting under load	See Annex C 1, C 2
Robustness	See Annex C 1, C 2
Maximum setting torque moment	See Annex B 5
Minimum edge distance and spacing	See Annex B 5
Resistance to steel failure (shear)	See Annex C 3, C 4
Resistance to pry-out failure	See Annex C 3, C 4
Resistance to concrete edge failure	See Annex C 3, C 4
Displacements under short term and long term loading	See Annex C 5
Durability of metal parts	See Annex A 3
<b>Seismic performance C1 and C2</b>	
Resistance to steel failure	See Annex C 6, C 7, C 8
Resistance to pull-out	See Annex C 6, C 7, C 8
Factor for annular gap	See Annex C 6, C 7, C 8
Displacement	See Annex C 8

### 3.2 Hygiene, health and environment (BWR 3)

No performance determined.

### 3.3 General aspects relating to fitness for use

Durability and serviceability are only ensured if the specifications of intended use according to Annex B 1 are kept.

## 4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 96/582/EC of the European Commission<sup>1</sup> the system of assessment verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table apply.

<sup>1</sup> Official Journal of the European Communities L 254 of 08.10.1996

<b>Product</b>	<b>Intended use</b>	<b>Level or class</b>	<b>System</b>
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the works) or heavy units	-	1

**5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD**

**5.1 Tasks of the manufacturer**

The manufacturer may only use raw materials stated in the technical documentation of this European Technical Assessment.

The factory production control shall be in accordance with the control plan which is a part of the technical documentation of this European Technical Assessment. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited at Technický a zkušební ústav stavební Praha, s.p.<sup>2</sup> The results of factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

**5.2 Tasks of the notified bodies**

The notified body shall retain the essential points of its actions referred to above and state the results obtained and conclusions drawn in a written report.

The notified certification body involved by the manufacturer shall issue a certificate of constancy of performance of the product stating the conformity with the provisions of this European Technical Assessment.

In cases where the provisions of the European Technical Assessment and its control plan are no longer fulfilled the notified body shall withdraw the certificate of constancy of performance and inform Technický a zkušební ústav stavební Praha, s.p without delay.

Issued in Prague on 19.08.2019

By

**Ing. Mária Schaan**

Head of the Technical Assessment Body

<sup>2</sup> The control plan is a confidential part of the documentation of the European Technical Assessment, but not published together with the ETA and only handed over to the approved body involved in the procedure of AVCP.

SMART S-IRE

Product description  
Rebars and materials

Annex A 4

## Specifications of intended use

### Anchorage subject to:

- Static and quasi-static load
- Seismic actions category C1 (max w = 0,5 mm):
  - threaded rod size M8, M10, M12, M16, M20, M24, M27, M30
  - rebar size Ø10, Ø12, Ø16, Ø20, Ø25, Ø32
- Seismic actions category C2 (max w = 0,8 mm): threaded rod size M12, M16, M20

### Base materials

- Cracked and uncracked concrete
- Reinforced or unreinforced normal weight concrete of strength class C20/25 at minimum and C50/60 at maximum according EN 206:2013.

### Temperature range:

- T3: -40°C to +70°C (max. short. term temperature +70°C and max. long term temperature +50°C)

### Use conditions (Environmental conditions)

- (X1) Structures subject to dry internal conditions (zinc coated steel, stainless steel, high corrosion resistance steel).
- (X2) Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel A4, high corrosion resistant steel).
- (X3) Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel).

Note: *Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).*

### Concrete conditions:

- I1 – installation in dry or wet (water saturated) concrete and use in service in dry or wet concrete.
- I2 – installation in water-filled (not sea water) and use in service in dry or wet concrete

### Design:

- The anchorages are designed in accordance with the EN 1992-4 under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings.
- Anchorages under seismic actions (cracked concrete) have to be designed in accordance with EN 1992-4.

### Installation:

- Hole drilling by hammer drill mode.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

### Installation direction:

- D3 – downward and horizontal and upwards (e.g. overhead) installation

## Installation instructions

Before commencing installation ensure the operative is equipped with appropriate personal protection equipment, SDS Hammer Drill, Air, Hole Cleaning Brush, good quality Dispensing Tool – either manual or power operated, Chemical cartridge with mixing nozzle and extension tube, if needed.

**1/** Using the SDS Hammer Drill in rotary hammer mode for drilling, with a carbide tipped drill bit of the appropriate size, drill the hole to the specified hole diameter and depth

**2/** Insert the Air Lance to the bottom of the hole and depress the trigger for 2 seconds. The compressed air must be clean – free from water and oil – and at a minimum pressure of 6bar (90psi). **Perform the blowing operation twice.**

**3/** Select the correct size Hole Cleaning Brush. Ensure that the brush is in good condition and the correct diameter. Insert the brush to the bottom of the hole, using a brush extension if needed to reach the bottom of the hole and withdraw with a twisting motion. There should be positive interaction between the steel bristles of the brush and the sides of the drilled hole. **Perform the brushing operation twice.**

**4/** Repeat 2

**5/** Repeat 3

**6/** Repeat 2

**7/** Select the appropriate static mixer nozzle, checking that the mixing elements are present and correct. Do not modify the mixer. Attach mixer nozzle to the cartridge. Check the Dispensing Tool is in good working order. Place the cartridge into the dispensing tool.  
Note: The SMCH4-07 is in two sections. One section contains the mixing elements and the other section is an extension piece. Connect the extension piece to the mixing section by pushing the two sections firmly together until a positive engagement is felt.

**8/** Extrude some resin to waste until an even-colored mixture is extruded, The cartridge is now ready

**9/** Attach an extension tube with resin stopper (if required) to the end of the mixing nozzle with a push fit (The extension tubes may be pushed into the resin stoppers and are held in place with a coarse internal thread).

**10/** Insert the mixing nozzle to the bottom of the hole. Extrude the resin and slowly withdraw the nozzle from the hole. **Ensure no air voids are created** as the nozzle is withdrawn. Inject resin until the hole is approximately  $\frac{3}{4}$  full and remove the nozzle from the hole.

**11/** Select the steel anchor element ensuring it is free from oil or other contaminants, and mark with the required embedment depth. Insert the steel element into the hole using a back and forth twisting motion to ensure complete cover, until it reaches the bottom of the hole. Excess resin will be expelled from the hole evenly around the steel element and there shall be no gaps between the anchor element and the wall of the drilled hole.

**12/** Clean any excess resin from around the mouth of the hole

**13/** Do not disturb the anchor until at least the minimum cure time has elapsed. Refer to the Working and Load Timetable to determine the appropriate cure time

**14/** Position the fixture and tighten the anchor to the appropriate installation torque.

**Do not over-torque the anchor as this could adversely affect its performance.**

**SMART S-IRE**

**Intended use**  
Installation procedure

**Annex B 3**

# Installation instructions

## Overhead Substrate Installation Method

1/ Using the SDS Hammer Drill in rotary hammer mode for drilling, with a carbide tipped drill bit of the appropriate size, drill the hole to the specified hole diameter and depth

2/ Insert the Air Lance to the bottom of the hole and depress the trigger for 2 seconds. The compressed air must be clean – free from water and oil – and at a minimum pressure of 6bar (90psi). **Perform the blowing operation twice.**

3/ Select the correct size Hole Cleaning Brush. Ensure that the brush is in good condition and the correct diameter. Insert the brush to the bottom of the hole, using a brush extension if needed to reach the bottom of the hole and withdraw with a twisting motion. There should be positive interaction between the steel bristles of the brush and the sides of the drilled hole. **Perform the brushing operation twice.**

4/ Repeat 2

5/ Repeat 3

6/ Repeat 2

7/ Select the appropriate static mixer nozzle, checking that the mixing elements are present and correct. Do not modify the mixer. Attach mixer nozzle to the cartridge. Check the Dispensing Tool is in good working order. Place the cartridge into the dispensing tool.

**Note:** The SMCH4-07 is in two sections. One section contains the mixing elements and the other section is an extension piece. Connect the extension piece to the mixing section by pushing the two sections firmly together until a positive engagement is felt.

8/ Extrude some resin to waste until an even-colored mixture is extruded, The cartridge is now ready

9/ Attach an extension tube with resin stopper (if required) to the end of the mixing nozzle with a push fit (The extension tubes may be pushed into the resin stoppers and are held in place with a coarse internal thread).

10/ Insert the mixing nozzle to the bottom of the hole. Extrude the resin and slowly withdraw the nozzle from the hole. **Ensure no air voids are created** as the nozzle is withdrawn. Inject resin until the hole is approximately ¾ full and remove the nozzle from the hole.

11/ Select the steel anchor element ensuring it is free from oil or other contaminants, and mark with the required embedment depth. Insert the steel element into the hole using a back and forth twisting motion to ensure complete cover, until it reaches the bottom of the hole. Excess resin will be expelled from the hole evenly around the steel element and there shall be no gaps between the anchor element and the wall of the drilled hole.

12/ Clean any excess resin from around the mouth of the hole

13/ Do not disturb the anchor until at least the minimum cure time has elapsed. Refer to the Working and Load Timetable to determine the appropriate cure time

14/ Position the fixture and tighten the anchor to the appropriate installation torque.

**Do not over-torque the anchor as this could adversely affect its performance.**
